First Device Testing Evidence

Adaptive Focus Studio | Team Boomers | Tester: Harshit Jain (002916196)

Device and Build

Physical Android device ID used during testing: **29071JEGR13383**. The final release APK from **build/app/outputs/flutter-apk/app-release.apk** was installed and tested successfully.

Verified Test Record

Test	Result	Verified behavior
Launch and five-screen flow	PASS	App launched and the core navigation/workflow operated on the physical Android device.
Preset create/edit/delete	PASS	Real repository-backed preset workflow operated correctly.
Focus timer	PASS	Start, Pause, Resume, Finish and Reset operated; Finish saved one SessionLog.
History & Insights	PASS	Real logs loaded; mood filtering, note operations, completed count and average worked.
Session Scout	PASS	Three recent finished Focused sessions produced a 10-minute suggestion after the 10-60 clamp.
Session Scout Apply	PASS	Apply opened Create Preset with Focused and the suggested duration prefilled; it did not auto-save or auto-start.
Settings persistence	PASS	Default duration 40, Reminders ON and Sound ON persisted after full close and relaunch.
Local notification	PASS	Android notification displayed "Focus session complete" with the completion message.
Local file export	PASS	History exported adaptive_focus_summary.txt to the app local files directory.
Offline operation	PASS	With internet disabled, presets, history, settings and the session workflow continued to work.
Release APK	PASS	The exact final release APK was installed and tested successfully.
Static analysis	PASS	flutter analyze completed with no issues.
Automated tests	PASS	Final suite completed with 50 tests passing.

Additional Verification

Background History insight calculation was integrated through Flutter compute() and physically tested without crashing. The final held-out Session Scout evaluation used five fixed synthetic cases: Session Scout MAE 1.20 minutes versus 9.20 minutes for the fixed 25-minute baseline, with lower absolute error in all five cases. These are synthetic evaluation fixtures, not real-user predictive results.

Evidence Note

This is a verification record of the physical tests performed during development. It does not fabricate screenshots that were not retained. The separate second-device PDF contains the supplied visual screenshot evidence.
