Second Device Testing Evidence

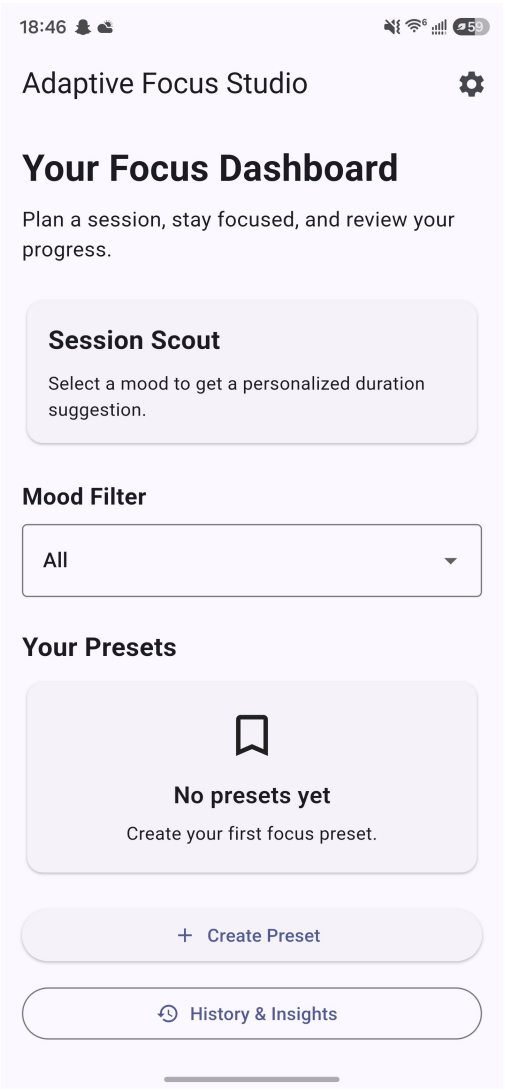

Adaptive Focus Studio | Team Boomers | Tester: Parsh Jadon (002936134)

Screenshots supplied from the separate Android acceptance test. Each image is presented as visual evidence only; supported outcomes are summarized at the end.

Supported Acceptance Results

Across the supplied screenshots, the separate-device test provides visual support for the following project behaviors:

Area	Supported evidence
Launch / Dashboard	Application launches and the Dashboard is displayed on the separate Android device.
Preset workflow	Saved presets are visible; Create Preset screens and invalid-field validation are shown.
Focus Session	Running/paused/finished session states and session-save confirmation are shown.
History & Insights	Completed Focused sessions, sample counts, and stored history are shown.
Session Scout	A recommendation based on three recent finished same-mood sessions is shown.
Settings	Default duration, Session Reminders, and Sound controls are shown configured.
Offline local data	Airplane mode is visible while stored Dashboard/History data remains accessible.
Local export	A successful session-summary export and local file path are shown.

Evidence boundary: The screenshot set does not independently prove a complete process-kill/relaunch settings-persistence sequence. This document intentionally does not claim more than the supplied visual evidence supports.
